

SOCRATES
APOLLODORUS
SIMMIAS
CEBES
CRITO

ATTENDANT OF THE PRISON

PHAEDO
SCENE: The Prison of Socrates
PLACE OF THE NARRATION: Phlius

P. 1

And they are right, Simmias, in saying this, with the exception of the words "They have found them out"; for they have not found out what is the nature of this death which the true philosopher desires, or how he deserves or desires death. But let us leave them and have a word with ourselves: Do we believe that there is such a thing as death?

To be sure, replied Simmias.

And is this anything but the separation of soul and body? And being dead is the attainment of this separation; when the soul exists in herself, and is parted from the body and the body is parted from the soul-that is death?

Exactly: that and nothing else, he replied.

And what do you say of another question, my friend, about which I should like to have your opinion, and the answer to which will probably throw light on our present inquiry: Do you think that the philosopher ought to care about the pleasures-if they are to be called pleasures-of eating and drinking?

Certainly not, answered Simmias.

And what do you say of the pleasures of love-should he care about them?

By no means.

And will he think much of the other ways of indulging the body-for example, the acquisition of costly raiment, or sandals, or other adornments of the body? Instead of caring about them, does he not rather despise anything more than nature needs? What do you say?

I should say the true philosopher would despise them.

Would you not say that he is entirely concerned with the soul and not with the body? He would like, as far as he can, to be quit of the body and turn to the soul.

That is true.

In matters of this sort philosophers, above all other men, may be observed in every sort of way to dis sever the soul from the body.

That is true.

Whereas, Simmias, the rest of the world are of opinion that a life which has no bodily pleasures and no part in them is not worth having; but that he who thinks nothing of bodily pleasures is almost as though he were dead.

That is quite true.

What again shall we say of the actual acquirement of knowledge?-is the body, if invited to share in the inquiry, a hinderer or a helper? I mean to say, have sight and hearing any truth in them? Are they not, as the poets are always telling us, inaccurate witnesses? and yet, if even they are inaccurate and indistinct, what is to be said of the other senses?-for you will allow that they are the best of them?

Certainly, he replied.

Then when does the soul attain truth?-for in attempting to consider anything in company with the body she is obviously deceived.

Yes, that is true.

Then must not existence be revealed to her in thought, if at all?

Yes.

And thought is best when the mind is gathered into herself and none of these things trouble her-neither sounds nor sights nor pain nor any pleasure-when she has as little as possible to do with the body, and has no bodily sense or feeling, but is aspiring after being?

That is true.

And in this the philosopher dishonors the body; his soul runs away from the body and desires to be alone and by herself?

That is true.

P. 2

Moreover, if there is time and an inclination toward philosophy, yet the body introduces a turmoil and confusion and fear into the course of speculation, and hinders us from seeing the truth: and all experience shows that if we would have pure knowledge of anything we must be quit of the body, and the soul in herself must behold all things in themselves: then I suppose that we shall attain that which we desire, and of which we say that we are lovers, and that is wisdom, not while we live, but after death, as the argument shows; for if while in company with the body the soul cannot have pure knowledge, one of two things seems to follow—either knowledge is not to be attained at all, or, if at all, after death. For then, and not till then, the soul will be in herself alone and without the body. In this present life, I reckon that we make the nearest approach to knowledge when we have the least possible concern or interest in the body, and are not saturated with the bodily nature, but remain pure until the hour when God himself is pleased to release us. And then the foolishness of the body will be cleared away and we shall be pure and hold converse with other pure souls, and know of ourselves the clear light everywhere; and this is surely the light of truth. For no impure thing is allowed to approach the pure. These are the sort of words, Simmias, which the true lovers of wisdom cannot help saying to one another, and thinking. You will agree with me in that?

Certainly, Socrates.

But if this is true, O my friend, then there is great hope that, going whither I go, I shall there be satisfied with that which has been the chief concern of you and me in our past lives. And now that the hour of departure is appointed to me, this is the hope with which I depart, and not I only, but every man who believes that he has his mind purified.

Certainly, replied Simmias.

And what is purification but the separation of the soul from the body, as I was saying before; the habit of the soul gathering and collecting herself into herself, out of all the courses of the body; the dwelling in her own place alone, as in another life, so also in this, as far as she can; the release of the soul from the chains of the body?

Very true, he said.

And what is that which is termed death, but this very separation and release of the soul from the body?

To be sure, he said.

And the true philosophers, and they only, study and are eager to release the soul. Is not the separation and release of the soul from the body their especial study?

That is true.

And as I was saying at first, there would be a ridiculous contradiction in men studying to live as nearly as they can in a state

of death, and yet repining when death comes.

Certainly.

True, Cebes, said Socrates; and shall I suggest that we talk a little of the probabilities of these things?

I am sure, said Cebes, that I should gladly like to know your opinion about them.

I reckon, said Socrates, that no one who heard me now, not even if he were one of my old enemies, the comic poets, could accuse me of idle talking about matters in which I have no concern. Let us, then, if you please, proceed with the inquiry.

Whether the souls of men after death are or are not in the world below, is a question which may be argued in this manner: The ancient doctrine of which I have been speaking affirms that they go from this into the other world, and return hither, and are born from the dead. Now if this be true, and the living come from the dead, then our souls must be in the other world, for if not, how could they be born again? And this would be conclusive, if there were any real evidence that the living are only born from the dead; but if there is no evidence of this, then other arguments will have to be adduced.

That is very true, replied Cebes.

Then let us consider this question, not in relation to man only, but in relation to animals generally, and to plants, and to everything of which there is generation, and the proof will be easier. Are not all things which have opposites generated out of their opposites? I

defer the discussion, if there is anything which he wants to say or have said.

But I have nothing more to say, replied Simmias; nor do I see any room for uncertainty, except that which arises necessarily out of the greatness of the subject and the feebleness of man, and which I cannot help feeling.

Yes, Simmias, replied Socrates, that is well said: and more than that, first principles, even if they appear certain, should be carefully considered; and when they are satisfactorily ascertained, then, with a sort of hesitating confidence in human reason, you may, I think, follow the course of the argument; and if this is clear, there will be no need for any further inquiry.

That, he said, is true.

But then, O my friends, he said, if the soul is really immortal, what care should be taken of her, not only in respect of the portion of time which is called life, but of eternity! And the danger of neglecting her from this point of view does indeed appear to be awful. If death had only been the end of all, the wicked would have had a good bargain in dying, for they would have been happily quit not only of their body, but of their own evil together with their souls. But now, as the soul plainly appears to be immortal, there is no release or salvation from evil except the attainment of the highest virtue and wisdom. For the soul when on her progress to the world below takes nothing with her but nurture and education; which are indeed said greatly to benefit or greatly to injure the departed, at the very beginning of its pilgrimage in the other world.

For after death, as they say, the genius of each individual, to whom he belonged in life, leads him to a certain place in which the dead are gathered together for judgment, whence they go into the world below, following the guide who is appointed to conduct them from this world to the other: and when they have there received their due and remained their time, another guide brings them back again after many revolutions of ages. Now this journey to the other world is not, as Aeschylus says in the "Telephus," a single and straight path-no guide would be wanted for that, and no one could miss a single path; but there are many partings of the road, and windings, as I must infer from the rites and sacrifices which are offered to the gods below in places where three ways meet on earth. The wise and orderly soul is conscious of her situation and follows in the path; but the soul which desires the body, and which, as I was relating before, has long been fluttering about the lifeless frame and the world of sight, is after many struggles and many sufferings hardly and with violence carried away by her attendant genius, and when she arrives at the place where the other souls are gathered, if she be impure and have done impure deeds, or been concerned in foul murders or other crimes which are the brothers of these, and the works of brothers in crime-from that soul everyone flees and turns away; no one will be her companion, no one her guide, but alone she wanders in extremity of evil until certain times are fulfilled, and when they are fulfilled, she is borne irresistibly to her own fitting habitation; as every pure and just soul which has passed through life in the company and under the guidance of the gods has also her own proper home.

I do not mean to affirm that the description which I have given of the soul and her mansions is exactly true-a man of sense ought hardly to say that. But I do say that, inasmuch as the soul is shown to be immortal, he may venture to think, not improperly or unworthily, that something of the kind is true. The venture is a glorious one, and he ought to comfort himself with words like these, which is the reason why lengthen out the tale. Wherefore, I say, let a man be of good cheer about his soul, who has cast away the pleasures and ornaments of the body as alien to him, and rather hurtful in their effects, and has followed after the pleasures of knowledge in this life; who has adorned the soul in her own proper jewels, which are temperance, and justice, and courage, and nobility, and truth-in these arrayed she is ready to go on her journey to the world below, when her time comes. You, Simmias and Cebes, and all other men, will depart at some time or other. Me already, as the tragic poet would say, the voice of fate calls. Soon I must drink the poison; and I think that I had better repair to the bath first, in order that the women may not have the trouble of washing my body after I am dead.

P. 3

9.4
And that principle which repels the musical, or the just?
The unmusical, he said, and the unjust.
And what do we call the principle which does not admit of death?
The immortal, he said.
And does the soul admit of death?

No.

Then the soul is immortal?

Yes, he said.

And may we say that this is proven?

Yes, abundantly proven, Socrates, he replied.

And supposing that the odd were imperishable, must not three be imperishable?

Of course.

And if that which is cold were imperishable, when the warm principle came attacking the snow, must not the snow have retired whole and unmelted-for it could never have perished, nor could it have remained and admitted the heat?

True, he said.

Again, if the uncooling or warm principle were imperishable, the fire when assailed by cold would not have perished or have been extinguished, but would have gone away unaffected?

Certainly, he said.

And the same may be said of the immortal: if the immortal is also imperishable, the soul when attacked by death cannot perish; for the preceding argument shows that the soul will not admit of death, or ever be dead, any more than three or the odd number will admit of the even, or fire or the heat in the fire, of the cold. Yet a person may say: "But although the odd will not become even at the approach of the even, why may not the odd perish and the even take the place of the odd?" Now to him who makes this objection, we cannot answer that the odd principle is imperishable; for this has not been acknowledged, but if this had been acknowledged, there would have been no difficulty in contending that at the approach of the even the odd principle and the number three took up their departure; and the same argument would have held good of fire and heat and any other thing.

Very true.

And the same may be said of the immortal: if the immortal is also imperishable, then the soul will be imperishable as well as immortal; but if not, some other proof of her imperishableness will have to be given.

No other proof is needed, he said; for if the immortal, being eternal, is liable to perish, then nothing is imperishable.

Yes, replied Socrates, all men will agree that God, and the essential form of life, and the immortal in general, will never perish.

Yes, all men, he said-that is true; and what is more, gods, if I am not mistaken, as well as men.

Seeing then that the immortal is indestructible, must not the soul, if she is immortal, be also imperishable?

Most certainly.

Then when death attacks a man, the mortal portion of him may be supposed to die, but the immortal goes out of the way of death and is preserved safe and sound?

True.

Then, Cebes, beyond question the soul is immortal and imperishable, and our souls will truly exist in another world!

I am convinced, Socrates, said Cebes, and have nothing more to object; but if my friend Simmias, or anyone else, has any further objection, he had better speak out, and not keep silence, since I do not know how there can ever be a more fitting time to which he can

p. 5
mean such things as good and evil, just and unjust-and there are innumerable other opposites which are generated out of opposites. And I want to show that this holds universally of all opposites; I mean to say, for example, that anything which becomes greater must become greater after being less.

True.

And that which becomes less must have been once greater and then become less.

Yes.

And the weaker is generated from the stronger, and the swifter from the slower.

Very true.

And the worse is from the better, and the more just is from the more unjust.

Of course.

And is this true of all opposites? and are we convinced that all of them are generated out of opposites?

Yes.

And in this universal opposition of all things, are there not also two intermediate processes which are ever going on, from one to the other, and back again; where there is a greater and a less there is also an intermediate process of increase and diminution, and that which grows is said to wax, and that which decays to wane?

Yes, he said.

And there are many other processes, such as division and composition, cooling and heating, which equally involve a passage into and out of one another. And this holds of all opposites, even though not always expressed in words-they are generated out of one another, and there is a passing or process from one to the other of them?

Very true, he replied.

Well, and is there not an opposite of life, as sleep is the opposite of waking?

True, he said.

And what is that?

Death, he answered.

And these, then, are generated, if they are opposites, the one from the other, and have there their two intermediate processes also?

Of course.

Now, said Socrates, I will analyze one of the two pairs of opposites which I have mentioned to you, and also its intermediate processes, and you shall analyze the other to me. The state of sleep is opposed to the state of waking, and out of sleeping waking is generated, and out of waking, sleeping, and the process of generation is in the one case falling asleep, and in the other waking up. Are you agreed about that?

Quite agreed.

Then suppose that you analyze life and death to me in the same manner. Is not death opposed to life?

Yes.

And they are generated one from the other?

Yes.

What is generated from life?

Death.

And what from death?

I can only say in answer-life.

Then the living, whether things or persons, Cebes, are generated from the dead?

That is clear, he replied.

Then the inference is, that our souls are in the world below?

That is true.

P. 6
And one of the two processes or generations is visible-for surely the act of dying is visible?

Surely, he said.

And may not the other be inferred as the complement of nature, who is not to be supposed to go on one leg only? And if not, a corresponding process of generation in death must also be assigned to her?

Certainly, he replied.

And what is that process?

Revival.

And revival, if there be such a thing, is the birth of the dead into the world of the living?

Quite true.

Then there is a new way in which we arrive at the inference that the living come from the dead, just as the dead come from the living; and if this is true, then the souls of the dead must be in some place out of which they come again. And this, as I think, has been satisfactorily proved.

Yes, Socrates, he said; all this seems to flow necessarily out of our previous admissions.

And that these admissions are not unfair, Cebes, he said, may be shown, as I think, in this way: If generation were in a straight line only, and there were no compensation or circle in nature, no turn or return into one another, then you know that all things would at last have the same form and pass into the same state, and there would be no more generation of them.

What do you mean? he said.

A simple thing enough, which I will illustrate by the case of sleep, he replied. You know that if there were no compensation of sleeping and waking, the story of the sleeping Endymion would in the end have no meaning, because all other things would be asleep, too, and he would not be thought of. Or if there were composition only, and no division of substances, then the chaos of Anaxagoras would come again. And in like manner, my dear Cebes, if all things which partook of life were to die, and after they were dead remained in the form of death, and did not come to life again, all would at last die, and nothing would be alive-how could this be otherwise? For if the living spring from any others who are not the dead, and they die, must not all things at last be swallowed up in death?

There is no escape from that, Socrates, said Cebes; and I think that what you say is entirely true.

Yes, he said, Cebes, I entirely think so, too; and we are not walking in a vain imagination; but I am confident in the belief that there truly is such a thing as living again, and that the living spring from the dead, and that the souls of the dead are in existence, and that the good souls have a better portion than the evil.

Cebes added: Your favorite doctrine, Socrates, that knowledge is simply recollection, if true, also necessarily implies a previous time in which we learned that which we now recollect. But this would be impossible unless our soul was in some place before existing in the human form; here, then, is another argument of the soul's immortality.

And were we not saying long ago that the soul when using the body as an instrument of perception, that is to say, when using the sense of sight or hearing or some other sense (for the meaning of perceiving through the body is perceiving through the senses)-were we not saying that the soul too is then dragged by the body into the region of the changeable, and wanders and is confused; the world spins

round her, and she is like a drunkard when under their influence?

Very true.

But when returning into herself she reflects; then she passes into the realm of purity, and eternity, and immortality, and unchangeableness, which are her kindred, and with them she ever lives, when she is by herself and is not let or hindered; then she ceases from her erring ways, and being in communion with the unchanging is unchanging. And this state of the soul is called wisdom?

That is well and truly said, Socrates, he replied.

And to which class is the soul more nearly alike and akin, as far as may be inferred from this argument, as well as from the preceding one?

I think, Socrates, that, in the opinion of everyone who follows the argument, the soul will be infinitely more like the unchangeable even the most stupid person will not deny that.

And the body is more like the changing?

Yes.

Yet once more consider the matter in this light: When the soul and the body are united, then nature orders the soul to rule and govern, and the body to obey and serve.

Now which of these two functions is akin to the divine? and which to the mortal? Does not the divine appear to you to be that which naturally orders and rules, and the mortal that which is subject and servant?

True.

And which does the soul resemble?

The soul resembles the divine and the body the mortal—there can be no doubt of that, Socrates.

Then reflect, Cebes: is not the conclusion of the whole matter this?—that the soul is in the very likeness of the divine, and immortal, and intelligible, and uniform, and indissoluble, and unchangeable; and the body is in the very likeness of the human, and mortal, and unintelligible, and multiform, and dissoluble, and changeable. Can this, my dear Cebes, be denied?

No, indeed.

But if this is true, then is not the body liable to speedy dissolution?

and is not the soul almost or altogether indissoluble?

Certainly.

And do you further observe, that after a man is dead, the body, which is the visible part of man, and has a visible framework, which is called a corpse, and which would naturally be dissolved and decomposed and dissipated, is not dissolved or decomposed at once, but may remain for a good while, if the constitution be sound at the time of death, and the season of the year favorable? For the body when shrunk and embalmed, as is the custom in Egypt, may remain almost entire through infinite ages; and even in decay, still there are some portions, such as the bones and ligaments, which are practically indestructible. You allow that?

Yes.

And are we to suppose that the soul, which is invisible, in passing to the true Hades, which like her is invisible, and pure, and noble, and on her way to the good and wise God, whither, if God will, my soul is also soon to go—that the soul, I repeat, if this be her nature and origin, is blown away and perishes immediately on quitting the body as the many say? That can never be, dear Simmias and Cebes. The truth rather is that the soul which is pure at departing draws after her no bodily taint, having never voluntarily had connection with the body, which she is ever avoiding, herself gathered into herself (for such abstraction has been the study of her life). And what does this mean but that she has been a true disciple of

P. 8
philosophy and has practised how to die easily? And is not philosophy the practice of death?

Certainly.

That soul, I say, herself invisible, departs to the invisible world to the divine and immortal and rational: thither arriving, she lives in bliss and is released from the error and folly of men, their fears and wild passions and all other human ills, and forever dwells, as they say of the initiated, in company with the gods. Is not this true, Cebes?

To return then to my distinction of natures which are not opposites, and yet do not admit opposites: as, in this instance, three, although not opposed to the even, does not any the more admit of the even, but always brings the opposite into play on the other side; or as two does not receive the odd, or fire the cold-from these examples (and there are many more of them) perhaps you may be able to arrive at the general conclusion that not only opposites will not receive opposites, but also that nothing which brings the opposite will admit the opposite of that which it brings in that to which it is brought. And here let me recapitulate-for there is no harm in repetition. The number five will not admit the nature of the even, any more than ten, which is the double of five, will admit the nature of the odd-the double, though not strictly opposed to the odd, rejects the odd altogether. Nor again will parts in the ratio of 3:2, nor any fraction in which there is a half, nor again in which there is a third, admit the notion of the whole, although they are not opposed to the whole. You will agree to that?

Yes, he said, I entirely agree and go along with you in that.

And now, he said, I think that I may begin again; and to the question which I am about to ask I will beg you to give not the old safe answer, but another, of which I will offer you an example; and I hope that you will find in what has been just said another foundation which is as safe. I mean that if anyone asks you "what that is, the inherence of which makes the body hot," you will reply not heat (this is what I call the safe and stupid answer), but fire, a far better answer, which we are now in a condition to give. Or if anyone asks you "why a body is diseased," you will not say from disease, but from fever; and instead of saying that oddness is the cause of odd numbers, you will say that the monad is the cause of them: and so of things in general, as I dare say that you will understand sufficiently without my adducing any further examples.

Yes, he said, I quite understand you.

Tell me, then, what is that the inherence of which will render the body alive?

The soul, he replied.

And is this always the case?

Yes, he said, of course.

Then whatever the soul possesses, to that she comes bearing life?

Yes, certainly.

And is there any opposite to life?

There is, he said.

And what is that?

Death.

Then the soul, as has been acknowledged, will never receive the opposite of what she brings. And now, he said, what did we call that principle which repels the even?

The odd.
